The Ladder of Inference

-- Chris Argyris

Uncertainty can cause more stress than inevitable pain

29 March 2016

Knowing that there is a small chance of getting a painful electric shock can lead to significantly more stress than knowing that you will definitely be shocked, finds a new UCL study funded by the Medical Research Council (MRC).

Early 19th Century, Brooklyn Museum

A word cloud of cognitive biases. The background is filled with various bias names in different sizes and shades of red/pink. A large, light gray oval with a black border is centered in the image, containing the title text. The title text is in a large, bold, black sans-serif font.

159 Cognitive Biases on Wikipedia

System justification
Normalcy bias
Illusion of control
Decoy effect
Bandwagon effect
Fallacy
Loss Aversion
Attribution
Optimism bias
Hyperbolic discounting
Distinction
Overconfidence effect
Pseudocertainty effect
Stereotyping
Anchoring
ascription bias
Forer effect
Moral luck
Congruence bias

“...*a fundamental assumption*...
...a certain level of
predictability and order
exists in the world.”

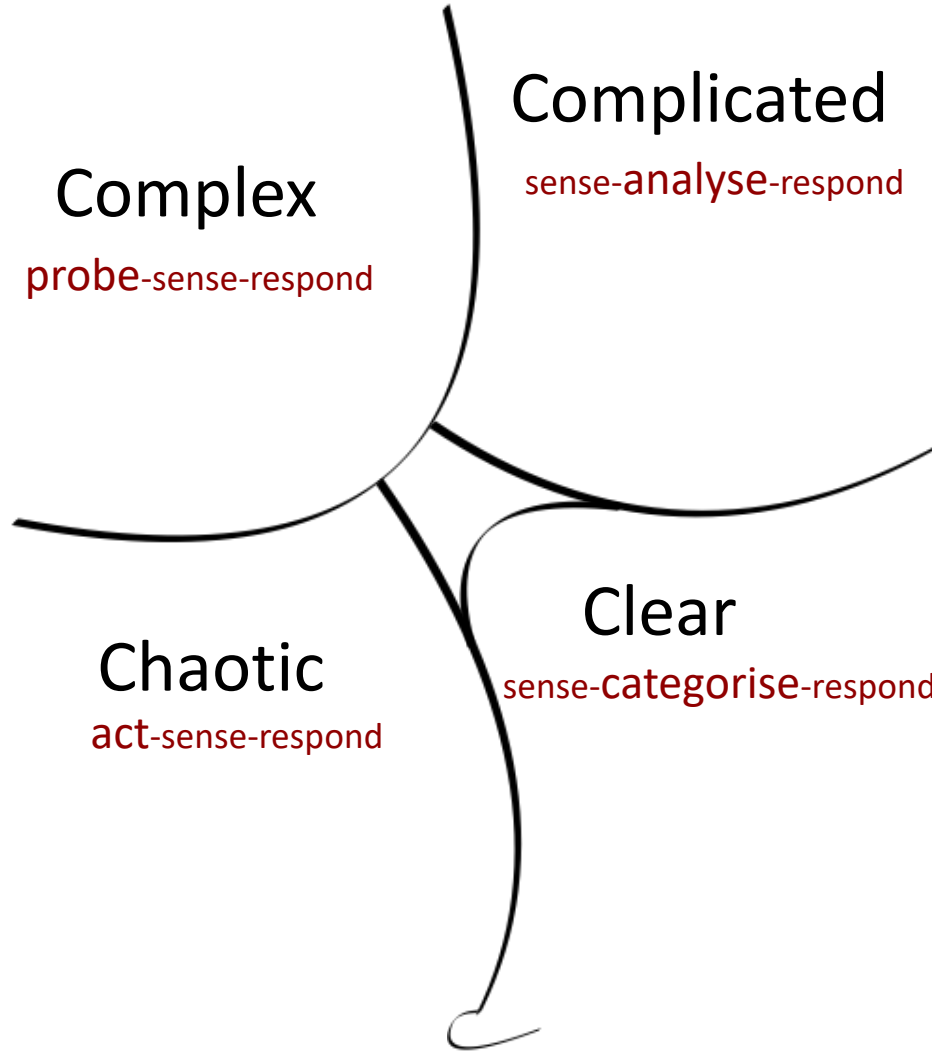

- Dave Snowden,
“A Leader’s Framework
for Decision Making”,
Harvard Business Review

Cynefin

A Safe-To-Fail Probe has...

Indicators of success

Indicators of failure

A way of dampening it

A way of amplifying it

Coherence

What's safe-to-fail in software?

Spike	Demonstrates to us (the team) that something is possible
PoC / Prototype	Demonstrates to someone else that something is possible
Alpha	Gets feedback from real users / customers . Prioritize showstoppers.
Beta	Gets feedback on readiness to release . Prioritize bugs.
Release	Provides value , even if in a limited context. Fix bugs urgently.

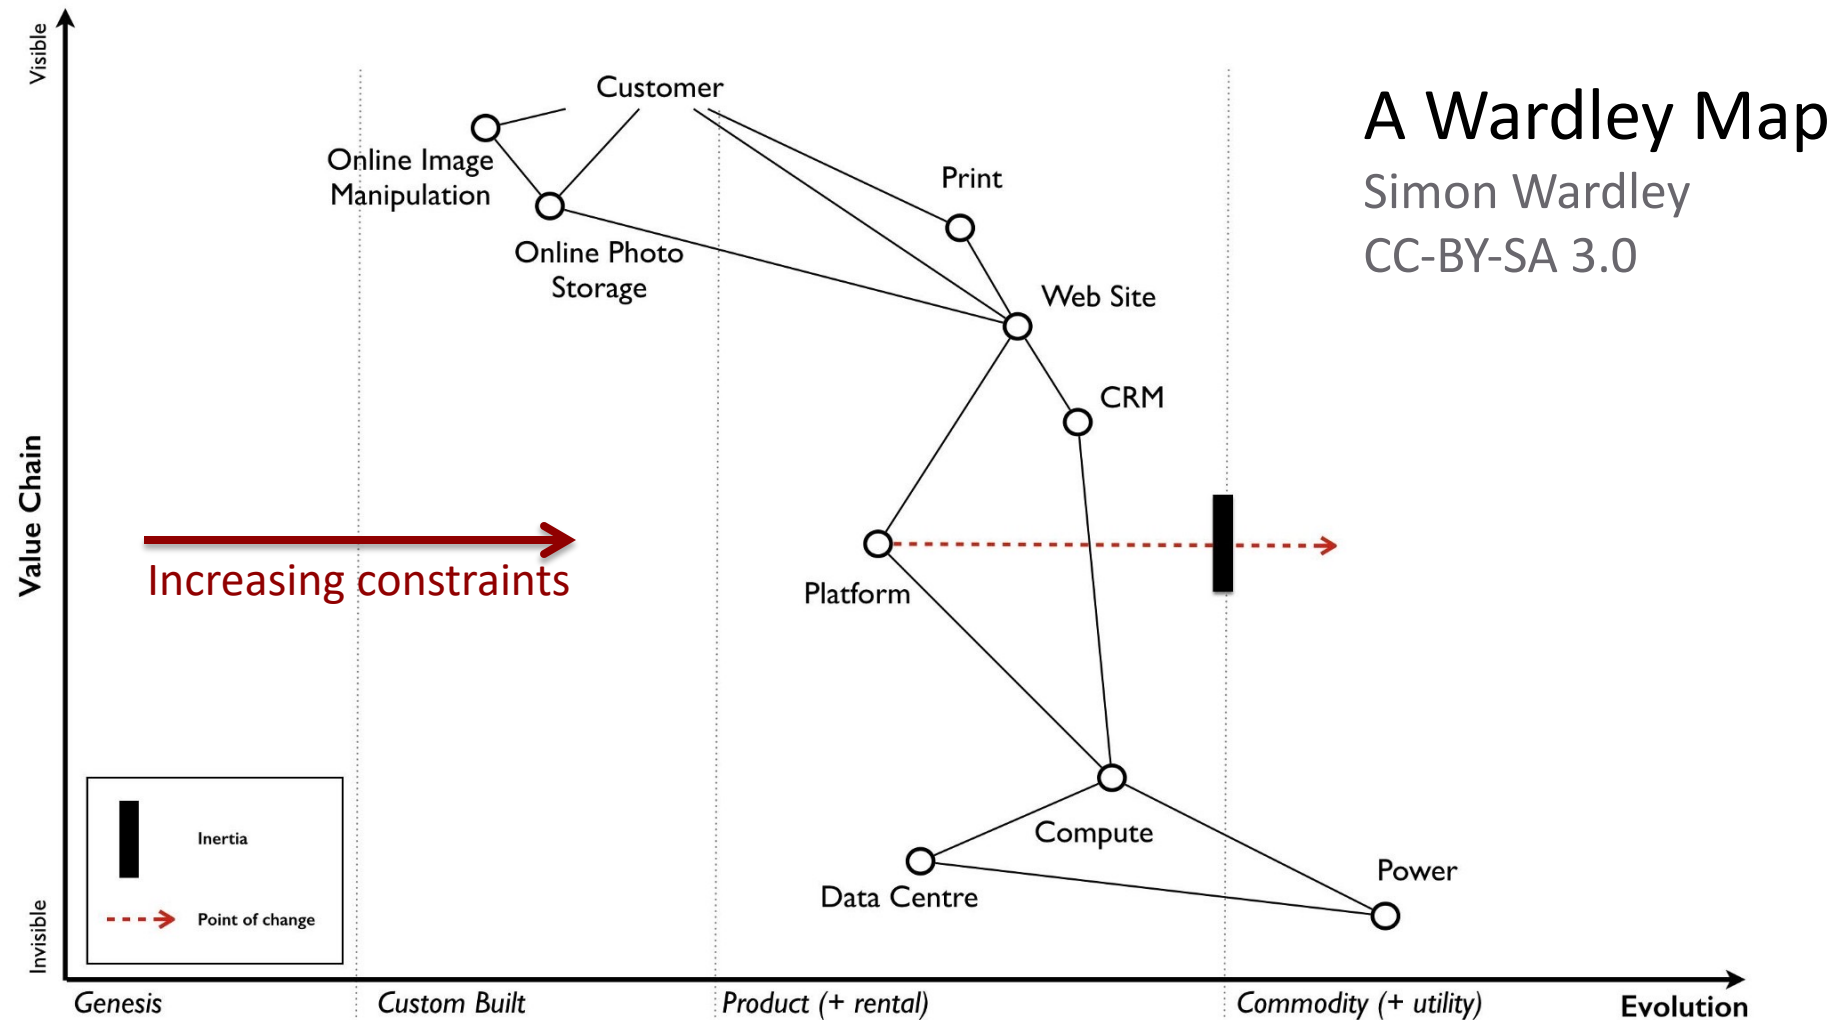

Cynefin

Complex
probe-sense-respond
Enabling constraints

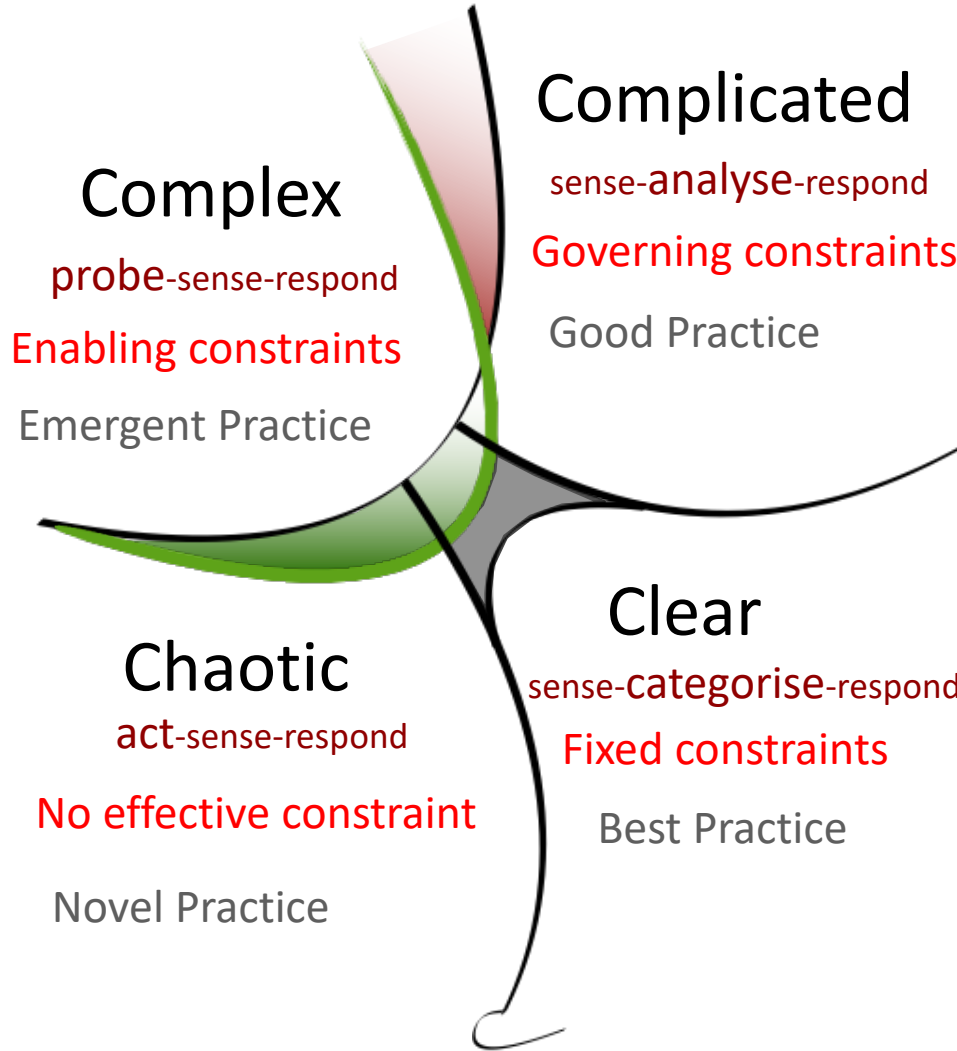

Complicated
sense-analyse-respond
Governing constraints

Chaotic
act-sense-respond
No effective constraint

Clear
sense-categorise-respond
Fixed constraints

Cynefin

“That won’t
work
because...”

A Safe-To-Fail Probe has...

A way of knowing it's succeeding

A way of knowing it's failing

A way of dampening it

A way of amplifying it

Coherence

~~A way of avoiding failure completely~~

Escaping Analysis Paralysis

“This is new; we’ve never done it before.

It seems **risky**.

Can we do a spike / PoC / prototype please?”

Coherence

A realistic reason
for thinking the probe
might have a
positive impact

Can you give me an example?

In high uncertainty...

...scenarios
and estimates
and plans

provide coherence,

not tests

Correlated in Retrospect

Listen to the stories

Use existing disposition

Move to adjacent possibles

Anchor and amplify working probes (Yes, and...!)
